

OMEGA HOUSE STUDIO

CORE PRODUCTION ASSET PIPELINE

Production System Specification — V1.0

ONE SOURCE. MULTIPLE ASSETS. ZERO CREATIVE WASTE.

System: Omega House Core Production Asset Pipeline

Version: 1.0

Status: Foundational Specification

Primary Domain: Melodic Sound Design → Music Production → Productization

Future Intelligence Layer: Sonic AI V3

1. System Purpose

The Omega House Core Production Asset Pipeline is a modular production system designed to turn one controlled creative session into multiple commercially useful, technically traceable assets.

The system begins with **fully engineered melodic one-shots and their source presets**. Those sounds become the foundation for a **16-bar melody**. The melody feeds the creation of **stems, MIDI, and the final composition**.

The finished production is then mastered, its engineering decisions are preserved, and the resulting material is packaged into four standalone products plus one premium bundle.

Core principle

Create once → derive many times → preserve everything → monetize at multiple levels.

2. Core Architecture

The Sound Kit is the foundational asset layer and contains the source sounds, associated presets, and preserved master/engineering chains.

3. The Five Commercial Assets

Asset	Primary Contents	Commercial Role
01 — Sound Kit	Engineered one-shots, source presets, production presets, master chains	Sound-design + engineering product
02 — Melody + Stems Pack	16-bar melody and individual musical stems	Reconstruction/remixing product
03 — MIDI Loop Kit	Cleaned MIDI derived from the musical source	Composition/data product
04 — Beat Pack	Finished/mastered compositions	Finished-production product
05 — Production Suite	Assets 01–04	Premium ecosystem/bundle

Important: The Production Suite is not independently manufactured. It is the aggregation layer for the four underlying products.

4. Production Lineage

Every production receives a unique Production ID.

Example: OH-RBLV1-001

All derived assets inherit the same production identity.

```
OH-RBLV1-001
|
├── SOUND FOUNDATION
│   ├── S01 – One-Shot
│   ├── S02 – One-Shot
│   ├── S03 – One-Shot
│   ├── P01 – Source Preset
│   ├── P02 – Source Preset
│   └── P03 – Source Preset
|
├── MEL – 16-Bar Melody
├── STEM – Musical Stems
├── MIDI – MIDI Derivatives
├── CMP – Full Composition
├── MSTR – Final Master
└── MC – Master/Engineering Chain
```

This establishes permanent **asset provenance**.

5. Stage 01 — Engineered One-Shot Foundation

Build the controlled melodic sound vocabulary before composition begins.

Typical categories:

- Piano
- Bass
- Synth

- Pluck
- Bell
- Texture
- Pad
- Other melodic instruments

Each one-shot must be intentionally designed, cleanly edited, properly gain-staged, tuned where applicable, processed appropriately, rendered, QC checked, named consistently, cataloged, and paired with its source preset when applicable.

A sound does not enter the production library merely because it sounds interesting. It becomes an approved asset only after it passes the engineering gate.

6. One-Shot / Preset Pairing Rule

When a one-shot originates from a synthesizer, sampler, or instrument, the source preset remains permanently associated with the rendered audio.

```
OH-RBLV1-S01/  
├─ Audio/  
│   └─ OH-RBLV1-S01.wav  
├─ Preset/  
│   └─ OH-RBLV1-S01.fst  
├─ Preview/  
│   └─ OH-RBLV1-S01.mp3  
└─ Metadata/  
    └─ OH-RBLV1-S01.json
```

Rule: The preset is part of the asset, not an optional attachment.

Where practical, loading the preset should reproduce the source sound used to create the rendered one-shot.

7. Stage 02 — 16-Bar Melody

The engineered one-shots become the musical vocabulary for the production.

The next production unit is the **16-bar melody**.

The melody establishes:

- Key
- BPM
- Scale
- Harmonic identity
- Main motif
- Sonic character
- Instrumentation
- Musical identity
- Omega House character

Melody approval gate

The melody advances only when it demonstrates:

- Musical quality
- Memorability
- Sonic identity
- Production usability
- Extractability
- Product potential

The melody is the master creative seed.

8. Stage 03 — Stems

The approved melody is separated into its musical components.

Possible stem categories:

- Piano
- Bass
- Synth
- Pluck
- Bell

- Texture
- Pad
- Other melodic elements

Source-of-truth rule

Stems must originate from the actual production session. Do not create replacement versions solely for packaging when the production already contains the correct source.

9. Stage 04 — MIDI

MIDI is derived from the same musical performance/source that produced the audio.

Possible MIDI assets:

- Melody MIDI
- Bass MIDI
- Piano MIDI
- Synth MIDI
- Pluck MIDI
- Other melodic MIDI

MIDI must be musically accurate, cleanly organized, correctly named, and free of unnecessary events.

MIDI becomes **Asset 03 — MIDI Loop Kit**.

10. Stage 05 — Full Composition

The melody and stems are developed into the finished composition.

16-BAR MELODY
+
STEMS / ARRANGEMENT
↓
FULL COMPOSITION

↓
MIX
↓
MASTER

The composition becomes **Asset 04 — Beat Pack**.

11. Stage 06 — Mastering & Engineering Preservation

Final products receive a dedicated polish/mastering stage.

Never:

Master → Export → Forget the chain

Instead:

```
Master
├─ Final Audio
├─ Master Chain
├─ Plugin Settings
├─ Presets
└─ Relevant Engineering Notes
```

Potential chain components include EQ, compression, saturation, clipping, limiting, metering, and other corrective or tonal processing.

The exact chains used to polish the final commercial assets are retained as reusable technical assets and become part of the Sound Kit where licensing and product scope permit.

12. Asset 01 — Sound Kit

The Sound Kit is the foundational sound-design and engineering product.

Contents

Source Sounds - Engineered one-shots - Approved melodic sound assets

Presets - Source instrument presets - Production presets - Relevant sound-design presets

Engineering - Master chains - Relevant processing chains - Reusable engineering presets

The Sound Kit answers:

What did Omega House use to build and polish this production?

13. Asset 02 — Melody + Stems Pack

The Melody + Stems Pack represents the **musical building-block layer**.

Contents

- 16-bar melody
- Individual stems
- Relevant audio variations
- BPM
- Key
- Scale
- Metadata

The customer receives the musical ingredients needed to reconstruct, remix, reinterpret, or expand the source idea.

14. Asset 03 — MIDI Loop Kit

The MIDI Loop Kit represents the **musical-data layer**.

Contents

- Melody MIDI
- Bass MIDI
- Piano MIDI
- Synth MIDI
- Pluck MIDI
- Other applicable melodic MIDI

The customer receives the underlying musical instructions rather than only rendered audio.

15. Asset 04 — Beat Pack

The Beat Pack represents the **finished-production layer**.

Potential contents:

- Full compositions
- Instrumentals
- Alternate versions
- Mastered versions
- Supporting production files

This is the finished musical product.

16. Asset 05 — Production Suite

The Production Suite is the premium bundle.

PRODUCTION SUITE – PREMIUM

- |
- 01_SOUND_KIT
- 02_MELODY_STEMS_PACK

```
├─ 03_MIDI_LOOP_KIT
├─ 04_BEAT_PACK
```

Commercial principle: The premium product is the ecosystem, not another piece of labor.

19. Quality-Control Gates

Gate 01 — Sound QC

Audio quality; editing; gain; tuning; naming; metadata; preset pairing.

Gate 02 — Melody QC

Musical quality; identity; key/BPM; 16-bar structure; product potential.

Gate 03 — Stem QC

All required stems; correct names; lengths; alignment; source relationship.

Gate 04 — MIDI QC

Musical accuracy; correct notes; timing; clean events; naming.

Gate 05 — Composition QC

Arrangement; mix; dynamics; tonal balance; final production quality.

Gate 06 — Master QC

Final loudness; true peak/headroom; clipping; translation; metadata; export integrity.

Gate 07 — Product QC

File completeness; naming; folder structure; metadata; artwork; previews; licensing documentation.

Gate 08 — Suite QC

Assets 01–04 complete; no broken references; no missing files; consistent versioning; premium bundle complete.

20. Asset Provenance Model

21. Separate Future Systems

The Core Production Asset Pipeline intentionally excludes drum one-shots, drum loops, drum kits, drum patterns, dedicated 808/drum workflows, FX libraries, FX loops, specialized transition design, and large-scale experimental sound-design systems.

These become separate modular systems:

They may eventually feed the composition engine without being mixed into the core asset taxonomy.

22. Sonic AI V3 Integration

This workflow is designed for machine-readable production intelligence.

Sonic AI V3 should eventually understand the complete provenance graph and answer:

- What one-shots created this melody?
- Which preset created each one-shot?
- Which stems came from this melody?
- Which MIDI files correspond to the stems?
- Which composition was created from the source?
- Which products contain this asset?
- Which master chain polished the final result?
- Which presets were used during production?
- Which assets are complete?
- Which assets failed QC?
- Which products are ready to publish?

Conceptual production object

```
{
  "production_id": "0H-RBLV1-001",
  "status": "MASTERED",
  "foundation": {
    "one_shots": [],
    "presets": []
  },
  "melody": {},
  "stems": [],
  "midi": [],
  "composition": {},

    "melody_stems_pack": {},
    "midi_loop_kit": {},
    "beat_pack": {},
    "production_suite": {}
  }
}
```

This becomes the beginning of an **Omega House Production Knowledge Graph**.

23. Omega House Production Laws

1. **SOURCE OF TRUTH** — Every production has one authoritative source session.
2. **PRESERVE LINEAGE** — Every derivative remains connected to its source.
3. **NEVER RECREATE UNNECESSARILY** — Derive downstream assets from upstream assets whenever possible.
4. **PRESERVE ENGINEERING** — Presets and master chains are assets, not disposable settings.
5. **SEPARATE ASSET CLASSES** — Melodic production, drums, FX, and specialized sound design remain modular.
6. **PRODUCTIZE THE WORK** — Every production is evaluated for every legitimate derivative.
7. **BUNDLE INSTEAD OF DUPLICATE** — The Production Suite aggregates existing assets.
8. **QC BEFORE PUBLICATION** — An asset is complete only when its technical and commercial requirements are satisfied.

24. Final Production Formula

```

25. Omega House Production Doctrine

One production should not produce one product.

One production should produce an ecosystem of related assets.

Engineer the sound.

Preserve the source.

Build the melody.

Derive the stems.

Extract the MIDI.

Finish the composition.

Preserve the engineering.

Master everything.

Package the derivatives.

Bundle the ecosystem.

Feed the resulting data back into the system.

OMEGA HOUSE STUDIO

ONE SOURCE. MULTIPLE ASSETS. ZERO CREATIVE WASTE.

END — CORE PRODUCTION ASSET PIPELINE V1.0
